MS Power Platform Developer

Role Overview

Lighthouse Healthcare Advisors (LHA) is looking for a power platform developer to assist in the firm's creation of proprietary tools that will contribute to both LHA and its clients' success. The role will report to the Chief Executive Officer and will be supported by a data analyst. The developer will be charged with helping to develop, test, enhance and support various internal and external applications built in the MS Power Platform.

About Us

Lighthouse Healthcare Advisors is an innovative team of industry experts partnering with healthcare systems, organizations, and providers to assist with management strategy, finance, process improvement, and compliance. We are passionate about our work and are committed to successfully leading our clients through the diverse challenges of healthcare change. We provide invaluable leadership to our clients and are trusted advisors in the ever-changing healthcare environment.

Key Responsibilities

- Development and refinement of LHA's proprietary tool P.O.R.T
- Development of business applications to help support the consulting and Coding, Compliance and Education functions of LHA
- Help LHA harness and utilize data to effectively make informed business decisions
- Translate complex functional and technical requirements into custom designed power platform applications
- Take responsibility for the development plans, product roadmaps, code and design reviews for all LHA power platform applications

Requirements

- 4+ years of experience with application design and development
- 1+ years of experience with Microsoft Power Platform based development and the use of Microsoft 365 components including SharePoint, Teams, Power Automate, Model Driven Power Apps, Canvas Power Apps, Flows, Dynamics, Data verse
- 3+ years of experience with participating in design and code reviews
- Experience with using Agile development methods and processes
- Ability to analyze time and effort estimation of design and development work to support sprint planning
- 3+ years' experience in SQL
- Self-starter who can conduct work with minimal direction
- Critical thinker who can anticipate needs and think of solutions outside the box
- Desire to be apart of a growing company and help develop the team

Preferred Experience

- BA or BS in computer science, statistics, math or engineering related field
- 2+ years' experience in the healthcare industry
